

Sheet 10

Solutions to be handed in before class on Friday December 20.

Problem 43. In this problem we consider the Chow ring of \mathbb{P}^2 and \mathbb{P}^3 .

1. Compute explicitly $A(\mathbb{P}^2)$ (resp. $A(\mathbb{P}^3)$) by expressing the products of Schubert classes $[\Omega_w]$ for $w \in \{e, s_1, s_2 s_1\}$ (resp. $w \in \{e, s_1, s_2 s_1, s_3 s_2 s_1\}$) in terms of Schubert classes.
2. Use the labelling of Schubert varieties Ω_λ via partitions λ for

$$\lambda \in \left\{ \emptyset, \square, \begin{array}{|c|} \hline \square \\ \hline \end{array} \right\}, \text{ resp. } \lambda \in \left\{ \emptyset, \square, \begin{array}{|c|} \hline \square \\ \hline \square \\ \hline \end{array} \right\} \quad (24)$$

and consider the Littlewood–Richardson coefficients

$$[\Omega_\lambda][\Omega_\mu] = \sum_{\nu} c_{\lambda, \mu}^{\nu} [\Omega_\nu]. \quad (25)$$

Show that

$$c_{\lambda, \mu}^{\nu} = \#\{\text{semistandard (skew) tableaux of shape } \nu/\lambda \text{ of weight } \mu\}. \quad (26)$$

3. Show that if $|\lambda| + |\mu| = |\nu|$ that

$$c_{\lambda, \mu}^{\nu} = [S(\nu) : S(\lambda) \otimes S(\mu)] \quad (27)$$

where $S(\lambda)$ for λ a partition of n denotes the corresponding irreducible S_n -module.

(5 points)

Problem 44. Calculate or describe via a picture the geometric representation for the Coxeter group (W, S) attached to

and

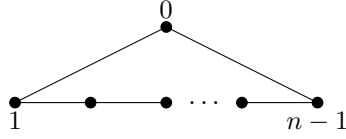

(2 points)

Problem 45. Consider the following set of periodic permutations of the integers

$$\left\{ f: \mathbb{Z} \rightarrow \mathbb{Z} \mid f(i+n) = f(i) + n, \sum_{i=1}^n f(i) = \sum_{i=1}^n i \right\}. \quad (28)$$

Show that this defines (via composition of maps) a group which is isomorphic to the Coxeter group with Coxeter diagram

(3 points)

Problem 46. Consider the Coxeter group (W, S) associated to

with $S = \{s, t\}$.

1. Describe all the elements of W .
2. Show that $W \cong S_2 \ltimes \mathbb{Z}$ as abstract groups.
3. Realise W as an affine reflection group. For this, consider the subspace $U = \mathbb{R}\alpha_s$ of the geometric representation and the affine hyperplanes

$$H_{\alpha, r} := \{\lambda \in U \mid 2(\lambda, \alpha) = r\}. \quad (29)$$

Show that W is isomorphic to the affine reflection group generated by $s_\alpha = s_{\alpha, 0}$ and $s_{\alpha, 1}$, where

$$s_{\alpha, r}: \lambda \mapsto \lambda - (2(\lambda, \alpha) - r)\alpha \quad (30)$$

is the affine reflection in the hyperplane $H_{\alpha, r}$.

4. Give an analogous description for the Coxeter group (W, S) associated to

(6 points)

Optional problem 3. Show that the Coxeter group attached to the Coxeter diagram

is isomorphic to $\mathrm{PGL}_2(\mathbb{Z}) := \mathrm{GL}_2(\mathbb{Z})/\{\pm 1\}$.

Here you can use that

1. $\mathrm{PGL}_2(\mathbb{Z})$ is generated by the order two elements

$$\begin{pmatrix} 0 & 1 \\ 1 & 0 \end{pmatrix}, \begin{pmatrix} -1 & 1 \\ 0 & 1 \end{pmatrix}, \begin{pmatrix} -1 & 0 \\ 0 & 1 \end{pmatrix} \quad (31)$$

which gives a morphism $\varphi: W \rightarrow \mathrm{PGL}_2(\mathbb{Z})$;

2. the subgroup $\mathrm{PSL}_2(\mathbb{Z})$ of index 2 is the free product of the groups of order 2 and 3 generated by $\varphi(s_1 s_2)$ and $\varphi(s_2 s_3)$.
